Power Enterprise' digital business with DataHOUSE™

Architected to be the ultimate home for your mission-critical business digital assets, DataHOUSE™ is designed for modern distributed enterprises. Reliable, accessible, scalable and agile, DataHOUSE™ offers the best of both worlds of fully managed cloud storage and high performance network access.

Going beyond traditional facility management, hosting and colocation services, DataHOUSE™ is built on world-class facilities with carrier-grade infrastructure, seamlessly meshed with different datacenters worldwide and specifically designed to handle today's business demands of private and hybrid cloud topologies.

DataHOUSE™ leads the market with true disaster recovery capabilities, high cost-effectiveness and rapid cross-regional cloud deployment enabling enterprise to enjoy a new level of data centre efficiency, flexibility and reliability.

DataHOUSE™ and the vision of ICT-MiiND

With the ICT-MiiND Strategy, CITIC Telecom CPC's DataHOUSE™ has been designed to fully support Smart Industries in their digital transformation initiatives integrating advanced new technology like 5G, the Internet of Things, Blockchain, Big Data, Artificial Intelligence and Augmented Reality with intelligent algorithms and powerful computing capabilities to enhance the efficiency of operations, maintenance and troubleshooting processes.

Key Benefits

Worldwide Presence

With extensive partnerships with trusted datacenter providers around the world, across 6 continents, and local expertise in different countries, we can source, deploy and manage different data center solutions to support your evolving business needs.

Proven uptime track record

Comprehensive Disaster Recovery capabilities provide intra-city, inter-city and cross-border redundancies, with dual redundant networks for operational resilience.

Future-proof

Designed to support enterprise cloud application and storage needs of today and tomorrow, DataHOUSE™ is highly scalable, flexible, and easily integrated with new innovative technologies.

Key Features

Intelligent and Innovative Data center Management

Smart Rack Management*

Monitor and manage your rack equipment remotely via our user-friendly online portal and mobile application allows you to view real-time temperature, humidity and power usage. Proactive push notifications alert you if your power usage reaches predefined utilization thresholds.

DataHOUSE™ AR Remote Hand*

A datacenter management tool leveraging Augmented Reality (AR) to view device configuration, 3D technical manuals and other advanced visualization and collaboration technologies to enhance operational efficiency.

Simplify ICT Management

Comprehensive range of managed ICT services, including facility management, connectivity, information security, cloud computing and other value-added managed services.

*Smart Rack Management and DataHOUSE AR Remote Hand available at selected DataHOUSE locations.

Full featured next generation Data Center

❯ Carrier-grade International standard

Carrier-class Telecommunications Infrastructure Standard featuring direct high-speed and high-bandwidth connections to internet exchange and carriers worldwide.

❯ Flexible Hosting

One-stop shop datacenter solution offers a range of flexible options including hosting, colocation, private cage, dedicated room, highly scalable cloud computing, disaster recovery and remote backup services.

❯ Convenient Locations

Most of our datacenter facilities are located at convenient physical locations close to transport links such as subways, railways, and airports, with a variety of locations worldwide.

❯ Carrier Neutral

Fast, reliable interconnections with any network service provider. Multiple connectivity options for maximum choice, including Ethernet, Internet, private networking, IPLC and others.

❯ True 24x7 Local Support

With true anytime, anywhere support, you enjoy no-nonsense direct access to our local teams of highly trained, highly experienced specialists, wherever and whenever you are in the world.
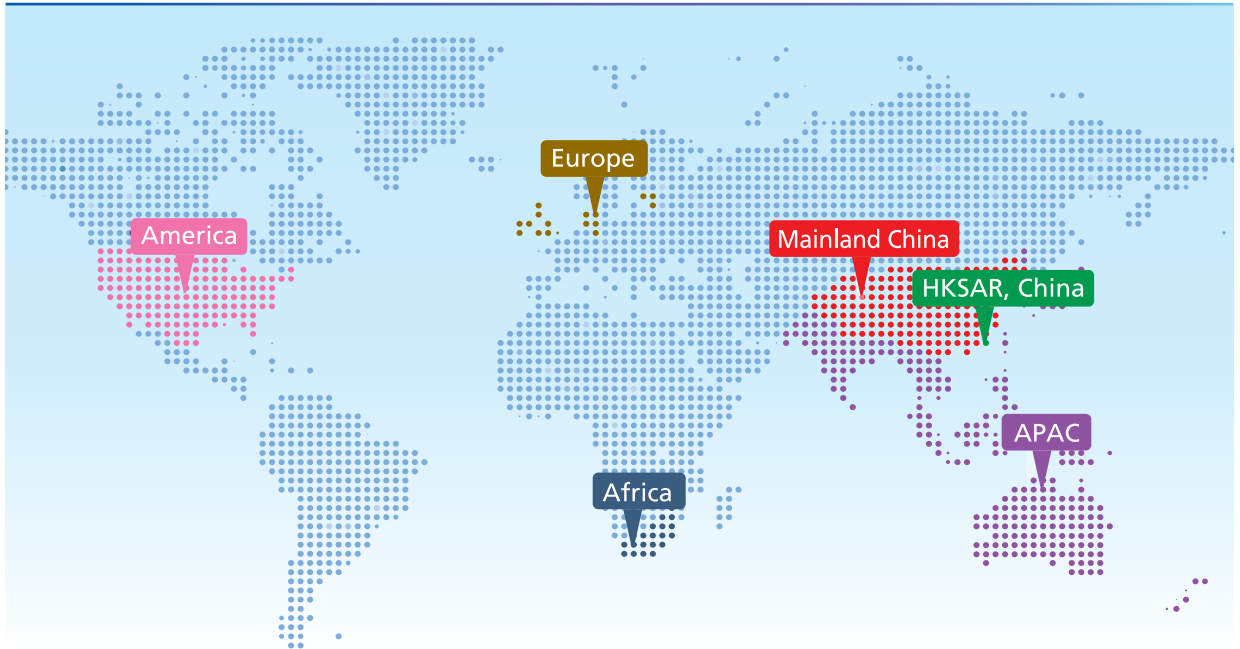

❯ Security & Compliance

Digital assets can be further protected with CITIC Telecom CPC's comprehensive TrustCSI™ security technologies.
