

Whole nation's personal data got hacked and leaked Can your enterprise escape?

In Bulgaria, 5 millions people suffered!

Bulgaria has a total population of 7 million and they have recently suffered from the biggest ever data breach. About 5 million's individual personal data was stolen from the country's National Revenue Agency. The government might also face a massive fine due to GDPR (European Data Protection Rules) which came into force last year.

In fact, "database" is inevitable in any industry, just a single loophole in your business database system may result in data leakage. It can happen in any organization.

CITIC Telecom CPC's TrustCSI™ IAS, together with our TrustCSI™ MSS through our 24 x 7 Security Operations Centers (SOCs), a team of certified professionals to ensure your security policy is fully complied with the latest regulations, leaving no chance for hackers to exploit any attacks to your business.

TrustCSI™ IAS

Identifies potentially damaging vulnerabilities in network infrastructure and web applications, with penetration test service reports and recommendations for immediate remedy actions.

TrustCSI™ MSS

Mitigates advanced cyberattacks through correlation and classification SIEM engine with real time alert service on a 24x7 basis
